

COMPOSITION FOR MITIGATING A PERNICIOUS THROMBOTIC EVENT

Abstract of the Disclosure

A composition. The composition comprises aspirin, magnesium, and nattokinase, and either niacin or nitroglycerine. The composition has a structural form of: a chewable form, a
5 dissolvable form, a liquid form, a spray form, or a suppository form. The structural form is suitable for being introduced into the body of a person, such as by means of a body cavity of the person. The composition may be used for mitigating adverse effects of an imminent or actually-occurring pernicious thrombotic event, such as a heart attack or stroke, in the person.
